

When using Google Docs - your students must use FIREFOX as the browser (please ignore the fact that the samples are in Safari, the kids need to use Firefox) and go to this address: <http://newberg.k12.or.us/students>. This will get them into their gmail and docs, etc.

When printing from Google Docs the students should click on the File>Print menu in Google Docs - not up at the top in Firefox.

Then the student will see a nice PDF version of the document and it can be printed from the top menu bar where it says

## Preview.
